SUB BATTLE SIMULATOR™ -- PREVIEW DISK INSTRUCTIONS

For Commodore 64® /128™ computers

- Set up your computer and turn it ON. (If using a Commodore 128, set the system to C64 mode.)
- Insert your preview game disk into the drive, label side up. Type **LOAD"*",8,1** and press **RETURN.**
- The program will load and you will be in the middle of a **Target Practice**. You will be faced with an enemy convoy and should be ready to begin the battle.
- Use the Keyboard Commands on the back of this card to play the game.

SUB BATTLE SIMULATOR is a WWII strategy game. Your objective in Target Practice is to use tactical and strategic decisions to destroy as many enemy ships and airplanes as possible, and to survive. (**Note**: There are Single Missions and Wartime Commands based on real WWII submarine battles on the actual game disk.)

Survival Hints:

- Use the **Crsr→** key to increase your speed towards the enemy.
- When you reach the enemy convoy, center the target in your view by pressing the **;** and **:** keys to scroll left and right. Press **J** to match your heading to your view.
- Once your target is centered, press the **T** and **Y** keys to fire your Forward and Aft (rear) torpedoes. (You must be viewing Aft to fire Aft torpedoes).
- Press **F** or **G** to fire your anti-aircraft and deck guns at enemy planes and ships. (You do not have to aim anti-air guns directly at the airplanes to hit them.) You will waste ammunition if your targets are not within range of your guns and torpedoes.
- Change your heading by pressing the **,** and **.** keys and match your view to your heading by pressing **U.**
- Keep an eye on your status by pressing **F8** or **8** for a status readout.
- If you get into trouble, check your status readout to make sure it's safe to *Crash Dive* (no damage to dive planes, pressure hull and ballast tanks). Press **RETURN** to *Crash Dive.*
- Remember you have a limited amount of ammunition. Keep an eye on the number of torpedoes, deck gun shells remaining, and the percentage of anti-aircraft gun shells remaining on the *Control Panel* (bottom of the screen).

SUB BATTLE SIMULATOR is not an easy game to master. Skill and strategy are necessary for survival and victory. Stay alert and be sure to keep an eye on your enemies!

*Keyboard Commands listed on the back of this card are for the full SUB BATTLE SIMULATOR game; not all of the commands work on this preview disk.
